

NanoVi™ product specs

NanoVi™ devices are used to regain, maintain or boost vitality and cellular health by signaling repair at the cellular level. Our unique, patent-protected approach helps initiate the body's own repair and regeneration mechanisms and reduce oxidative stress damage.

We offer three NanoVi™ devices, with different levels of intensity and session times.

NanoVi Eco™

The most **affordable** model

- Used in homes by people with time for a longer session

The NanoVi Eco™ is the most economical way to bring the benefits of NanoVi™ technology right into your home. The simple touch screen and handy remote control for decorative lights make it easy to set yourself up for a relaxing session that promotes cellular health and relieves oxidative stress damage.

The standard session time for the Eco is 60 minutes and this can be broken into 2-3 shorter sessions. People trying to regain cellular health and boost vitality may use the NanoVi Eco™ for much longer than the standard 60-minute session.

Session time: 60 minutes

NanoVi Pro™

The most **popular** model

- Used in homes and professional settings
- Includes SmartCard™ technology

The NanoVi Pro™ is the perfect trade off between price and performance. It is the number one choice of both private and professional NanoVi™ users.

The Pro device is twice as powerful as the Eco with a session time of 30 minutes. The shorter session time makes it easy for multiple family members to share time on the NanoVi Pro™. A 30-minute session also fits well for most clinics and centers both as a standalone session or in conjunction with another service.

Session time: 30 minutes

NanoVi Exo™

The most **powerful** model

- Used in homes and professional settings
- Includes SmartCard™ technology

The NanoVi Exo™ is the newest and most powerful NanoVi™ option. It is twice as powerful as the Pro, or four times more powerful than the Eco.

With a session time of just 15 minutes, the Exo is ideal for performance athletes, professionals helping their clients boost vitality, bounce back faster, and even for private users who want a big impact in a little time. For professionals, the Exo can handle twice as many of your clients since shorter sessions means faster turnaround times.

Session time: 15 minutes
